Awning Tips For The 9000, 8500 and Sunchaser Patio Awnings

1. At the start of each camping season, make sure the top and bottom brackets are tight.
2. If the lift handle is hard to operate, spray it with silicone spray. You may have to repeat this process periodically. You may also need to spray the bottom bracket release tab, rafter, and support arms.
3. One of the secrets to a long life for your awning is to keep it clean. Follow the instructions for your type of awning.
4. If you get water streaking or experience seeping behind your awning rail, inspect the rail for loose screws or peeling sealant.
5. To avoid water pooling, lower one end of the awning for proper water runoff.
6. If you're expecting heavy or prolonged wind or rain or if you will be leaving the awning unattended, it's best to roll it up. Damage as a result of weather is not covered by warranty.
7. Finally, make sure the awning is extended high enough before opening the entry door.
